**RADIOACTIVITY**

Source: Activation of the materials and impurities. There may be some contamination.

Uncertainty: Only approximate estimates have been made of the total specific activities. The activities quoted are those at the time of Final Dismantling &amp; Site Clearance (85 years after Station shutdown).

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities: A weighted mean of the activity has been calculated from available data. Activities for reactor misc metals was calculated from a neutron activation calculation.

Other information: The activities quoted are those at 85 years after reactor shutdown, i.e. in 2091. There may be some contamination by Cs137.
