

WASTE STREAM**9G37/C****Conditioned Miscellaneous Activated Components**

SITE Trawsfynydd
SITE OWNER Nuclear Decommissioning Authority

WASTE CUSTODIAN Magnox Limited

WASTE TYPE ILW

Is the waste subject to Scottish Policy: No

WASTE VOLUMES

		Conditioned	Packaged
Stocks:	At 1.4.2022.....	~46.4 m ³	52.3 m ³
Total future arisings:		0 m ³	0 m ³
Total waste volume:		46.4 m ³	52.3 m ³
Number of waste packages in stock:	At 1.4.2022.....	16 package(s)	

Comment on volumes: All of the waste in this stream has now been conditioned.

Uncertainty factors on volumes:
 Stock (upper): x 1.0 Arisings (upper) x
 Stock (lower): x 1.0 Arisings (lower) x

WASTE SOURCE Redundant or defective components removed from the reactor core.

PHYSICAL CHARACTERISTICS

General description: The waste comprises miscellaneous activated components, principally absorber bars, held in mild steel baskets and encapsulated in PFA/OPC and packaged in 3m³ stainless steel boxes. The waste is conditioned and packaged.

Physical components (%wt): Steel components constitute approximately 65% wt, reactor grade A graphite constitutes approximately 5% wt and PFA/OPC grout about 30% wt.

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m³): ~3.5

Comment on density: -

CHEMICAL COMPOSITION

General description and components (%wt): Steel components constitute approximately 65% wt, reactor grade A graphite constitutes approximately 5% wt and PFA/OPC grout about 30% wt.

Chemical state: Alkali

Chemical form of radionuclides: H-3: The chemical form of tritium has not been determined but may be present as water or as other inorganic or organic compounds.

C-14: Carbon 14 will be present as graphite.

Cl-36: The chemical form of chlorine 36 has not been determined.

Se-79: The selenium content is insignificant.

Tc-99: The technetium content is insignificant.

Ra: The radium isotope content is insignificant.

Th: The thorium isotope content is insignificant.

U: The uranium isotope content is insignificant.

Np: The neptunium content is insignificant.

Pu: The chemical form of plutonium isotopes has not been determined but may be plutonium oxides.

Metals and alloys (%wt): Contains flux flattening bars 855 mm x 70 mm diameter containing graphite and steel pellets approximately 25 mm x 25 mm diameter. Flux flattening bars comprise the bulk of the waste.

WASTE STREAM**9G37/C****Conditioned Miscellaneous Activated Components**

Potential for the waste to contain discrete items:

Yes. Large Metal Items (LMIs)/"substantial" thickness items considered "durable" assumed DIs; Stainless items assumed DIs (MAC also includes nimonics, known DIs)

PACKAGING AND CONDITIONING

Container type:

Container	Waste packaged (%vol)	Waste loading (m ³)	Payload (m ³)	Number of packages
3m ³ box (round corners)	100.0	2.9	2.9	16

Container type comment:

The waste has been conditioned.

Range in container waste volume:

There is no significant variability in the volume of waste per container

Other information on containers:

The container material is stainless steel.

Conditioned density (t/m³):

~3.5

Conditioned density comment:

-

Other information on conditioning:

The waste was conditioned September 2006 onwards.

RADIOACTIVITY

Source:

Irradiated components removed from the reactor.

Uncertainty:

The values quoted were derived from radionuclide fingerprints which are considered to be accurate to a factor of 4.

Definition of total alpha and total beta/gamma:

Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities:

Estimates are based upon theoretical assessments supported by measurements.

Other information:

-
