

SITE	Wylfa		
SITE OWNER	Nuclear Decommissioning Authority		
WASTE CUSTODIAN	Magnox Limited		
WASTE TYPE	ILW		
Is the waste subject to Scottish Policy:	No		
WASTE VOLUMES	Reported		
Stocks:	At 1.4.2022.....	4.4 m ³	
Future arisings -	1.4.2022 - 31.3.2023.....	0.6 m ³	
Total future arisings:		0.6 m ³	
Total waste volume:		5.0 m ³	
Comment on volumes:	Note the 4.35m ³ is the total volume of drums and not the actual volume of waste. 0.6m ³ future arisings is an estimate based on previously retrieved and packaged waste i.e. drier drain vessels & BCD piston rods, and volume is package based (4x drums @ 0.15m ³)		
Uncertainty factors on volumes:	Stock (upper): x 1.2	Arisings (upper) x 1.2	
	Stock (lower): x 0.9	Arisings (lower) x 0.9	
WASTE SOURCE	Hard trash, redundant equipment and consumables from the auxiliary gas system and burst can detector systems.		
PHYSICAL CHARACTERISTICS			
General description:	Metal, plastic, paper and cloth		
Physical components (%wt):	Paper/cloth (11% wt), plastic/rubber (15% wt), metal (70% wt (inc Steel Drums)), wood (2% wt) and rubble/concrete 2%.		
Sealed sources:	The waste does not contain sealed sources.		
Bulk density (t/m ³):	5.5		
Comment on density:	70% of stream is metal.		
CHEMICAL COMPOSITION			
General description and components (%wt):	The waste comprises metal, plastic, paper and cloth. Also rubber in trace quantities and possibly glass. Chlorine-36 is present as solid ammonium chloride. Paper/cloth (11% wt), plastic/rubber (15% wt), metal waste (40% wt), steel drums (~30% wt), wood (2% wt) and rubble/concrete (2% wt).		
Chemical state:	Neutral		
Chemical form of radionuclides:	H-3: The chemical form of tritium has not been determined. C-14: The chemical form of carbon 14 has not been determined Cl-36: The majority of chlorine 36 is expected to be in the form of ammonium chloride. Se-79: The selenium 79 content is insignificant Tc-99: The chemical form of technetium 99 has not been determined. Ra: Radium isotope content is expected to be insignificant Th: The thorium content is insignificant U: The uranium isotope content is insignificant Np: The neptunium isotope content is insignificant Pu: The plutonium isotope content is insignificant		
Metals and alloys (%wt):	- (%) Stainless steel..... 5.0 Other ferrous metals..... ~65.0 Iron..... Aluminium..... TR Beryllium.....

WASTE STREAM**9H27****Auxiliary Gas Systems**

Potential for the waste to contain discrete items: Yes. Large Metal Items (LMIs) / "substantial" thickness items considered "durable" assumed DIs; Stainless items assumed DIs

PACKAGING AND CONDITIONING

Conditioning method: It has been assumed the Waste will be transferred to a Type VI DCIC however this is subject to the necessary options assessment studies and has not been confirmed. An opportunity to divert some waste from DCICs through Nuclear Waste Services alternative treatment route is being pursued with thermal treatment considered the optimised solution subject to gaining the appropriate approvals from the regulator'

RADIOACTIVITY

Source: Main sources of activity are Cl36, C-14 and H-3

Uncertainty: Specific activity is a function of Station operating history. The values quoted are indicative of the activities that would be expected.

WASTE STREAM**9H27****Auxiliary Gas Systems**

Definition of total alpha and total beta/gamma:

Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities:

Data taken from Y0682 The radiochemical analysis of Wylfa 9H14D metallic waste issue 3, 2017; NNL12060 Radiochemical analysis of Wylfa 9H14 samples – phase 2, 2012; GAU4156 Analysis of 39 metal and 2 plastic samples, issue 2, 2020 for RWI 2022 update.
