

WASTE STREAM	9J301	Graphite ILW
---------------------	--------------	---------------------

SITE Hunterston A
SITE OWNER Nuclear Decommissioning Authority

WASTE CUSTODIAN Magnox Limited

WASTE TYPE ILW

Is the waste subject to Scottish Policy: Yes

WASTE VOLUMES

		Reported
Stocks:	At 1.4.2022.....	0 m ³
Future arisings -	1.4.2075 - 31.3.2080.....	3434.0 m ³
Total future arisings:		3434.0 m ³
Total waste volume:		3434.0 m ³

Comment on volumes: Waste arisings are assumed to occur at a uniform rate over 5 years. Final Dismantling & Site Clearance is assumed to commence in 2071 with reactor dismantling commencing in 2075 and lasting for 5 years. The volumes and radioactivity have been calculated for 85 years after reactor shutdown, i.e. 2075.

Uncertainty factors on volumes: Stock (upper): x Arisings (upper) x 1.2
 Stock (lower): x Arisings (lower) x 0.8

WASTE SOURCE Moderator graphite from reactor dismantling.

PHYSICAL CHARACTERISTICS

General description: Graphite blocks and other graphite components.
 Physical components (%wt): Graphite (100%).
 Sealed sources: The waste does not contain sealed sources.
 Bulk density (t/m³): ~1.25
 Comment on density: Density estimate based upon assumed packing efficiency of the waste.

CHEMICAL COMPOSITION

General description and components (%wt): Graphite and possibly traces of ferrous metals.
 Chemical state: Neutral
 Chemical form of radionuclides: H-3: Tritium may be chemically bound with the graphite.
 C-14: Carbon 14 will be present as graphite.
 Cl-36: Chlorine 36 will probably be chemically bound to the graphite. Some may be linked chemically with impurities in the graphite.
 Se-79: The selenium content is insignificant.
 Tc-99: The technetium content is insignificant.
 Ra: Radium isotope content is insignificant.
 Th: The thorium content is insignificant.
 U: There may be traces of uranium as metal or oxide.
 Np: The neptunium content is insignificant.
 Pu: There may be traces of plutonium as metal or oxide.
 Metals and alloys (%wt): There are no metallic items present.

	(%wt)	Type(s) / Grade(s) with proportions	% of total C14 activity
Stainless steel.....	TR	There may be trace contamination by ferrous metals.	
Other ferrous metals.....	TR	There may be trace contamination by ferrous metals.

WASTE STREAM 9J301 Graphite ILW

Total complexing agents..... TR

Potential for the waste to contain discrete items: Yes. Graphite Bricks/Tiles assumed to be DIs. Bricks assumed drummed (ungouted) so assumed Bricks are DIs; If gouted, Drum is also a DI. "Rubble" pieces assumed drummed (ungouted) assumed NOT DIs; If gouted, Drum is a DI.

PACKAGING AND CONDITIONING

Conditioning method: The waste is not expected to be supercompacted. It will be placed in baskets in the waste packages to be encapsulated.

Plant Name: None

Location: Hunterston A Decommissioning Site.

Plant startup date: 2075

Total capacity (m³/y incoming waste): ~5000.0

Target start date for packaging this stream: 2075

Throughput for this stream (m³/y incoming waste): ~382.0

Other information: The waste will be packaged immediately after the reactors are dismantled. It will be placed in basket and encapsulated. Basket of different ILW waste may be in the same package.

Likely container type:	Container	Waste packaged (%vol)	Waste loading (m ³)	Payload (m ³)	Number of packages
	4m box (no shielding)	100.0	~16.2	18.9	212

Likely container type comment: The waste is assumed to be in baskets in the waste package so the occupied volume in the package is greater than the original waste volume.

Range in container waste volume: Not yet determined. No significant variability is expected.

Other information on containers: Stainless Steel. Container choice may be influenced by Transport Regulations at the time of final site clearance.

Likely conditioning matrix: BFS/OPC and None

Other information: -

Conditioned density (t/m³): ~1.7

Conditioned density comment: The conditioned waste density assumes that the waste will be encapsulated. Should the waste not be encapsulated, the density is estimated at 1.1 t/m³.

Other information on conditioning: The waste will be in baskets placed in the waste packages. Baskets of different Final Dismantling & Site Clearance ILW wastes may be in the same waste package. If encapsulation is not required the density of the waste product would be about 1.1 t/m³.

Opportunities for alternative disposal routing: -

Baseline Management Route	Opportunity Management Route	Stream volume (%)	Estimated Date that Opportunity will be realised	Opportunity Confidence	Comment

RADIOACTIVITY

Source: Activation of the graphite and impurities.

WASTE STREAM**9J301****Graphite ILW**

Uncertainty:	The values quoted were derived by calculation from available material specification and are indicative of the activities that are expected. The major source of uncertainty is of the impurity levels.
Definition of total alpha and total beta/gamma:	Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.
Measurement of radioactivities:	The specific activities were estimated from neutron activation calculations of the material and its impurities. With additional data from newly calculated inventories including 100 ppb U precursor as per M/EF/GEN/EAN/0008/20
Other information:	The activities quoted are those at 85 years after reactor shutdown (2075). Fission of uranium impurity in the graphite may result in some fission product and actinide activity. There may be some contamination by Cs137.
