Reactor) LLW

SITE Hunterston A

SITE OWNER Nuclear Decommissioning Authority

WASTE CUSTODIAN Magnox Limited

WASTE TYPE LLW

Is the waste subject to

Scottish Policy:

No

WASTE VOLUMES

Comment on volumes: Arisings are assumed to arise at a uniform rate over 5 years. Final Dismantling & Site

Clearance is assumed to commence in 2071 with reactor dismantling commencing in 2075 and lasting for 5 years. The volumes and radioactivity have been calculated for 85 years

after reactor shutdown, i.e. 2075.

Uncertainty factors on

volumes:

Stock (upper): x Arisings (upper) x 1.2
Stock (lower): x Arisings (lower) x 0.8

WASTE SOURCE A variety of materials from active plant dismantling.

PHYSICAL CHARACTERISTICS

General description: A variety of materials including metals.

Physical components (%wt): The waste consists of temporary active drains (~55%wt), vacuum clean and wash down

area items (~15%wt) and metals (~30%wt).

Sealed sources: The waste does not contain sealed sources.

Bulk density (t/m³): ~

Comment on density: The density is of the raw waste.

CHEMICAL COMPOSITION

General description and components (%wt):

A variety of materials including zirconium (<2.5% wt), aluminium (<2.5%wt), lead

(~15%wt), copper (~10%wt), other materials (~70%wt).

Chemical state: Neutral

Chemical form of radionuclides:

H-3: The chemical form of tritium has not been assessed, but may be incorporated into the

steel.

C-14: The chemical form of carbon 14 has not been assessed but may be graphite.

CI-36: The chemical form of chlorine 36 has not been assessed.

Se-79: The selenium-79 content is insignificant. Tc-99: The technetium-99 content is insignificant.

Ra: The radium content is insignificant. Th: The thorium content is insignificant. U: The uranium content is insignificant.

Np: The neptunium isotope content is insignificant.

 $\label{eq:pu:pu:pu:new} \mbox{Pu: The plutonium content is insignificant.}$

Metals and alloys (%wt): Items will be cut for packaging, but an assessment of the item dimensions has not been

made.

RADIOACTIVITY

Source: Activation of the materials and impurities. There may be some contamination.

Uncertainty: Only very approximate estimates have been made of the total specific activities. The

activities quoted are those at the time of Final Dismantling & Site Clearance (about 85

years after Station shutdown).

Definition of total alpha

and total beta/gamma:

Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of

radioactivities:

For the reactor materials the specific activities were estimated from neutron activation

calculations of the material and its impurities.

Other information: The activities quoted are those at 85 years after reactor shutdown, i.e. in 2075. There may

be some contamination by Cs137.
