Total waste volume:	1548.0 m ³
Comment on volumes:	Arisings are assumed to arise at a uniform rate over 5 years. Final Dismantling & Site Clearance is assumed to commence in 2071 with reactor dismantling commencing in 2075 and lasting for 5 years. The volumes and radioactivity have been calculated for 85 years after reactor shutdown, i.e. 2075.

RADIOACTIVITY

Source: Activation of the materials and impurities. There may be some contamination.

Uncertainty: Only very approximate estimates have been made of the total specific activities. The activities quoted are those at the time of Final Dismantling & Site Clearance (about 85 years after Station shutdown).

Definition of total alpha and total beta/gamma: Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities: The specific activity of the reactor thermal insulation was assumed to be similar to that for Trawsfynydd.
