SITE Hunterston A SITE OWNER **Nuclear Decommissioning Authority WASTE CUSTODIAN** Magnox Limited ILW; SPD3 **WASTE TYPE** Is the waste subject to Yes Scottish Policy: **WASTE VOLUMES** Reported Stocks: At 1.4.2022.....  $0.6 \, \text{m}^3$ Total future arisings:  $0 \, \text{m}^3$ Total waste volume:  $0.6 \, \text{m}^{3}$ Comment on volumes: No further arisings. Arisings (upper) Uncertainty factors on Stock (upper): x 1.2 volumes: Stock (lower): Arisings (lower) **WASTE SOURCE** The source of the waste is in-core components. PHYSICAL CHARACTERISTICS The waste consists of redundant control rods and associated equipment such as distance General description: tubes. Control rods are approximately 200 kg each and are 7.08 m long (120 mm maximum diameter). Physical components (%wt): Control rods and distance tubes (~100%). The waste does not contain sealed sources. Sealed sources: Bulk density (t/m3): ~2.5 Comment on density: Bulk density is raw as stored and is estimated. CHEMICAL COMPOSITION General description and The waste consists principally of stainless steel, with other unspecified metals. components (%wt): Chemical state: Neutral Chemical form of H-3: The chemical form of tritium has not been determined but may be present as water or radionuclides: as other inorganic compounds or as organic compounds. C-14: Carbon 14 will be present as graphite. CI-36: The chemical form of chlorine 36 content has not been determined. Se-79: The selenium content is insignificant. Tc-99: The chemical form of technetium has not been determined. Ra: The radium isotope content is insignificant. Th: The thorium isotope content is insignificant. U: The chemical form of uranium isotopes has not been determined but may be uranium oxides. Np: The neptunium content is insignificant. Pu: The chemical form of plutonium isotopes has not been determined but may be plutonium oxides. Control rods are 7 m long x 0.12 m max diameter. Metals and alloys (%wt): (%wt) Type(s) / Grade(s) with proportions % of total C14 activity Stainless steel..... ~90.0 The waste contains steel and other metals. Alloying proportions of tin, nickel, niobium and molybdenum may be present. Control rods contain boron steel inserts. Other ferrous metals.....

Potential for the waste to contain discrete items:

Yes. Large Metal Items (LMIs)/"substantial" thickness items considered

"durable" assumed DIs; Stainless items assumed DIs.

#### **PACKAGING AND CONDITIONING**

Conditioning method: The waste is not expected to be supercompacted. It will be placed in baskets in a

4m ILW stainless steel box and is now assumed to be encapsulated.

Plant Name:

Location: Hunterston A Decommissioning Site

Plant startup date: 2075 Total capacity ~5000.0

(m³/y incoming waste):

Target start date for

2075 packaging this stream:

Throughput for this stream (m<sup>3</sup>/y incoming waste):

<1.0

Other information: The current proposal is to store the waste as at present until Final Dismantling

commences. All waste is expected to be retrieved when a conditioning campaign is

undertaken. Baskets of different ILW may be in the same package.

Likely container type:

Container	Waste packaged (%vol)	Waste loading (m³)	Payload (m³)	Number of packages	
4m box (no shielding)	100.0	16.2	18.9	< 1	

Likely container type

comment:

Container choice may be influenced by the Transport Regulations at the time of Final Site Clearance. The waste is assumed to be in baskets in the waste package so the occupied

volume in the package is greater than the original waste volume.

Range in container waste

volume:

This waste will only occupy one box.

Other information on

containers:

The container material is likely to be stainless steel.

Likely conditioning matrix:

Other information:

Conditioned density (t/m³):

Not specified

The waste is assumed to be encapsulated. The matrix is likely to be BFS/OPC. ~3.0

Conditioned density

comment:

This density assumes that the waste will be encapsulated.

Other information on

conditioning:

Appropriate plant will be provided at the Station in accordance with Company strategy. Wastes will be in baskets placed in the waste packages. Baskets of different Final Dismantling ILW wastes may be in the same packages. The matrix is likely to be BFS/OPC. The density of the encapsulated waste would probably be about 3t/m3.

Opportunities for alternative

disposal routing:

Baseline Opportunity Stream Date that Management Route Management Route volume (%)  We stimated Date that Opportunity will be realised.	Opportunity Confidence	Comment
---	---------------------------	---------

#### **RADIOACTIVITY**

Source: Activation of steel, principally due to Fe55 and Co-60.

Specific activity is a function of Station operating history. The vaules quoted are indicative Uncertainty:

of the activities that might be expected.

Definition of total alpha and total beta/gamma:

Where totals are shown on the table of radionuclide activities they are the sums of the listed alpha or beta/gamma emitting radionuclides plus 'other alpha' or 'other beta/gamma'.

Measurement of radioactivities:

Estimates are based upon theoretical assessments.

Other information:

	Mean radioactivity, TBq/m³				Mean radioactivity, TBq/m³
